

Skills and Resource table

Saturday, 25 July 2026 7:57 pm

Tool / Technology	Purpose	Learning Resource
Jira	Agile project management, sprint planning, backlog management, user story tracking	Atlassian Jira Training
Confluence	Documentation, requirements management, knowledge sharing	Confluence Getting Started
Agile & Scrum	Framework for iterative software delivery and team collaboration	Scrum Guide
User Stories	Capturing requirements from the user’s perspective	Atlassian User Stories Guide
Backlog Management	Prioritising and managing product features and tasks	Atlassian Product Backlog Guide
UAT (User Acceptance Testing)	Validating that business requirements are met before release	Microsoft UAT Overview
Business Requirements Documentation (BRD)	Formal documentation of business needs and requirements	IIBA Business Analysis Resources
Stakeholder Management	Engaging business and technical stakeholders effectively	PMI Stakeholder Management Guide
Integration Testing	Testing interactions between systems and components	BrowserStack Integration Testing Guide

Gateway Bank Role-Specific Technologies

Tool / Technology	Purpose	Learning Resource
SQL	Querying databases, validating data, supporting analysis	SQLBolt Interactive SQL Tutorial
Postman	API testing, API documentation, request validation	Postman Learning Center
REST APIs	System integration and data exchange	REST API Tutorial
Web Services	Communication between applications (REST/SOAP)	IBM Web Services Introduction
ETL (Extract, Transform, Load)	Moving and transforming data between systems	Microsoft ETL Overview
JavaScript	Scripting and API testing automation	MDN JavaScript Guide
ServiceNow	IT service management, change requests, incident management	ServiceNow Training and Certification
Azure Active Directory (Microsoft Entra ID)	Identity and access management	Microsoft Entra Learning Path
UX/UI Design	Designing intuitive user experiences and interfaces	Google UX Design Certificate
Agentic AI / LLM Systems	AI-powered automation, chatbots, workflow assistants	OpenAI Platform Docs

ActivePipe Role-Specific Technologies

Tool / Technology	Purpose	Learning Resource
Story Mapping	Visualising user journeys and organising requirements	Atlassian Story Mapping Guide
INVEST Framework	Writing high-quality user stories	Agile Alliance INVEST Guide

Acceptance Criteria	Defining success conditions for user stories	Atlassian Acceptance Criteria Guide
Product Discovery	Identifying customer needs and product opportunities	Atlassian Product Discovery Guide
Release Planning	Planning features and deployments across releases	Atlassian Release Planning Guide
Feature Decomposition	Breaking large initiatives into manageable stories	Scaled Agile Feature Decomposition

Priority Learning Plan for You

Given your background (Computer Science + Software Engineer + Project Management):

Priority	Topic	Why
1	Jira	Appears in both roles and is heavily used by BAs
2	User Stories & Acceptance Criteria	Core BA skill for both jobs
3	Agile & Scrum	Mentioned in both roles
4	SQL	Already likely familiar; strengthen BA use cases
5	Postman & APIs	Strong requirement for Gateway Bank
6	Confluence	Common BA documentation tool
7	UAT	Frequently asked in BA interviews
8	ETL Concepts	Gateway-specific requirement
9	ServiceNow	Nice-to-have for enterprise environments
10	Azure AD / Entra ID	Gateway-specific technical advantage

With your software engineering background, you could realistically become interview-ready for junior-to-mid-level Technical Business Analyst roles after focused study on Jira, Agile, User Stories, UAT, and Postman/APIs, as these are the main gaps between a software engineer/project coordinator profile and a Business Analyst profile.
