

Tools and short explanation

#	Tool	Short Explanation
1	JIRA	JIRA is a project and issue management tool commonly used in Agile teams. I would use it to create and track user stories, tasks, bugs, and project progress. It provides visibility of work and helps teams prioritise and manage tasks. Main purpose: project and work tracking.
2	Confluence	Confluence is a collaboration and documentation platform. I would use it to document requirements, meeting notes, processes, technical information, and project knowledge. It provides a central source of information for the team. Main purpose: documentation and knowledge sharing.
3	Microsoft Visio	Visio is a diagramming tool used to visually represent business and technical processes. I can use it to create flowcharts, process maps, organisational charts, and system diagrams. Main purpose: visualising processes and systems.
4	Draw.io / diagrams.net	Draw.io is an online diagramming tool similar to Visio. I can use it to quickly create process flows, system diagrams, workflows, and other visual documentation. Main purpose: creating simple and collaborative diagrams.
5	Trello	Trello is a visual task and project management tool based on boards, lists, and cards. I can use cards to represent tasks and move them through stages such as To Do, In Progress, and Done. Main purpose: simple task and workflow management.
6	Microsoft Planner	Microsoft Planner is a task management tool within Microsoft 365. I can use it to assign tasks, set deadlines, track progress, and organise team activities. Main purpose: team task and project management.
7	OneNote	OneNote is a digital note-taking and information organisation tool. I can use it to record meeting notes, requirements, ideas, research, and action items. Main purpose: organising and sharing notes and information.
8	Microsoft 365 Suite	Microsoft 365 provides productivity applications such as Word, Excel, PowerPoint, Outlook, Teams, SharePoint, and OneDrive. I can use these tools for documentation, analysis, presentations, communication, and collaboration. Main purpose: everyday business productivity and collaboration.
9	Outlook	Outlook is an email and calendar management tool. I can use it to communicate with stakeholders, schedule meetings, manage calendars, and organise business correspondence. Main purpose: professional communication and scheduling.
10	Microsoft Teams	Teams is a collaboration and communication platform. I can use it for meetings, chat, file sharing, and collaboration with project teams. Main purpose: team communication and collaboration.
11	Git	Git is a distributed version control system used to track changes in files and source code. I can use commands such as commit, branch, merge, pull, and push to manage changes. Main purpose: version control and collaborative development.
12	GitHub	GitHub is a platform for hosting Git repositories and collaborating on software projects. I can use it to manage repositories, review changes, track issues, and collaborate with developers. Main purpose: code collaboration and repository management.
13	Bitbucket	Bitbucket is another Git-based repository and collaboration platform. I can use it for source-code management, pull requests, and collaboration between developers. Main purpose: version control and software team collaboration.
14	SharePoint	SharePoint is a Microsoft platform for document management, intranets, and team collaboration. I can use it to store, organise, and share project documents while controlling access. Main purpose: document and information management.
15	OneDrive	OneDrive is Microsoft's cloud file storage platform. I can use it to store, synchronise, access, and share files across devices.

		Main purpose: cloud-based file storage and sharing.
16	Power BI	Power BI is a business intelligence and data visualisation tool. I can use it to connect to data, analyse information, and create dashboards and reports. Main purpose: turning data into insights for decision-making.
17	Lucidchart	Lucidchart is a web-based diagramming and visualisation tool. I can use it to create process flows, workflows, system diagrams, and other visual documentation, particularly when collaborating with a team. Main purpose: collaborative process and diagram visualisation.
18	Microsoft Forms	Microsoft Forms is a tool for creating online forms, surveys, and questionnaires. I can use it to collect feedback, requirements, survey responses, or other structured information from users and stakeholders. Main purpose: data and feedback collection.
19	Excel	Excel is a spreadsheet and data analysis tool. I can use it to organise data, perform calculations, analyse information, create charts, and track project or business information. Main purpose: data analysis and reporting.
20	Notepad++	Notepad++ is a lightweight text and source-code editor. I can use it to quickly edit configuration files, scripts, logs, or text files. Main purpose: quick text and code editing.
21	PowerShell	PowerShell is a command-line shell and scripting language, particularly useful in Windows environments. I can use it to automate repetitive tasks, manage files and systems, and execute administrative commands. Main purpose: automation and system administration.
22	Batch Script / CMD	Batch scripting allows commands to be automated using Windows .bat files and CMD. I can use it to automate repetitive tasks such as file operations, launching programs, or running a sequence of commands. Main purpose: basic Windows automation.
