

Business Requirement Document (My Vodafone)

Monday, 31 August 2026

10:21 pm

Practice: Pick a real app you use daily (e.g., a food delivery app).

Write a 1-page Business Requirements Document (BRD) and
5 user stories with acceptance criteria for one feature (e.g., "reorder past meal").

1. App: My Vodafone Mobile App
2. Executive Summary:
 - a. Purpose: The purpose of the My Vodafone mobile application is to provide Vodafone customers with a convenient digital self-service platform to manage their mobile services, accounts, billing, and support needs from their smartphones.
 - b. Business Problem: Customers currently rely on multiple channels such as physical stores, phone support, and web portals to manage their Vodafone services. This can lead to increased customer effort, longer resolution times, and higher operational costs.
 - c. Business Objectives:
 - * Improve customer experience through digital self-service.
 - * Reduce customer service call volumes.
 - * Increase customer engagement with Vodafone services.
 - * Provide real-time access to account and usage information.
 - * Enable digital purchases and plan management.
 - * Improve payment and billing management.
3. Project Scope:
 - a. In Scope

The mobile application will allow customers to:

 - * Register and log in securely.
 - * View account information.
 - * View current mobile plans.
 - * Upgrade or change plans.
 - * Check remaining data, calls, and SMS usage.
 - * View billing information.
 - * Make bill payments.
 - * Manage payment methods.
 - * Activate prepaid SIM cards.
 - * Purchase Vodafone products and services.
 - * Contact customer support.
 - * Receive notifications and account updates.
 - b. Out of Scope
 - * Physical store management.
 - * Internal Vodafone employee functions.
 - * Network infrastructure management.
 - * Third-party telecommunications services.
4. Stakeholders:

Stakeholder	Role
Vodafone Customers	End users of the application
Customer Service Team	Support customer enquiries
Billing Department	Manage customer billing information
Marketing Team	Promote products and offers
IT Development Team	Develop and maintain the application
Product Manager	Define product roadmap and priorities

5. Current State (As-Is)

Customers use various channels to access services:

 - * Vodafone website
 - * Customer service hotline

- * Physical Vodafone stores
- * Email support

Challenges include:

- * Inconsistent customer experience
- * High call centre workload
- * Longer service resolution times
- * Limited self-service capabilities

6. Future State (To-Be)

Customers will access a single mobile application to:

- * Manage their accounts independently
- * Monitor usage in real time
- * Purchase products and services
- * Manage billing and payments
- * Receive support without contacting a call centre

Benefits:

- * Improved customer satisfaction
- * Reduced operational costs
- * Increased digital engagement
- * Faster service delivery

7. Functional Requirements:

ID	Requirement	Priority
FR-01	User shall register and log into the application securely	High
FR-02	User shall view account profile information	High
FR-03	User shall view current mobile plan details	High
FR-04	User shall check remaining data, call, and SMS allowances	High
FR-05	User shall change or upgrade mobile plans	High
FR-06	User shall activate a prepaid SIM card	High
FR-07	User shall view billing history	High
FR-08	User shall pay outstanding bills	High
FR-09	User shall manage payment methods	High
FR-10	User shall browse and purchase Vodafone products	Medium
FR-11	User shall contact customer support via chat or messaging	High
FR-12	User shall receive notifications about bills, promotions, and usage	Medium
FR-13	User shall view order and transaction history	Medium

8. Non-Functional Requirements

ID	Requirement
NFR-01	System availability shall be 99.9%
NFR-02	Application response time shall be less than 3 seconds
NFR-03	Customer data shall be encrypted during transmission
NFR-04	Application shall support Android and iOS devices
NFR-05	Application shall comply with privacy regulations
NFR-06	Multi-factor authentication shall be supported
NFR-07	Application shall support 100,000 concurrent users

9. Business Rules

Rule ID	Description
BR-01	Only registered Vodafone customers can access account information
BR-02	Customers must verify identity before changing payment methods

BR-03	Customers must have an active service before changing plans
BR-04	Bill payments must be processed through approved payment gateways
BR-05	SIM activation requires a valid SIM serial number

10. Assumptions

- Customers have internet access.
- Existing Vodafone customer database is available.
- Existing billing systems can integrate with the mobile application.
- Existing payment gateway services are available.

11. Success Criteria

Metric	Target
Customer self-service adoption	> 70%
Reduction in customer service calls	20%
Mobile app rating	4.5 stars or higher
System uptime	99.9%
Successful digital payments	95%

12. High-Level Use Cases

UC-01 View Remaining Data

Actor: Customer

Process:

1. User logs into My Vodafone.
2. System retrieves account details.
3. System displays remaining data, calls, and SMS balances.

—

UC-02 Pay Bill

Actor: Customer

Process:

1. User selects Billing.
2. System displays outstanding balance.
3. User selects payment method.
4. Payment is processed.
5. Confirmation is displayed.

—

UC-03 Activate Prepaid SIM

Actor: Customer

Process:

1. User selects Activate SIM.
2. User enters SIM serial number.
3. System validates SIM.
4. System activates service.
5. Confirmation is displayed.

Feature: View Remaining Data Usage

User Story 1 – View Remaining Data Balance

User Story:

As a Vodafone customer, I want to view my remaining data balance so that I can monitor my internet usage.

Acceptance Criteria:

- * Given I am logged into the My Vodafone app,
- * When I open the dashboard

when I open the dashboard,

- * Then my remaining data balance is displayed.
 - * The balance is updated with the latest available information from Vodafone's system.
 - * The data balance is displayed in GB or MB.
-

User Story 2 – View Data Usage Breakdown

User Story:

As a Vodafone customer, I want to see how much data I have used during my billing cycle so that I can better manage my usage.

Acceptance Criteria:

- * Given I am logged into the app,
 - * When I select "Usage Details",
 - * Then I can view my total data allowance.
 - * I can view the amount of data used.
 - * I can view the amount of data remaining.
 - * The information relates to the current billing period.
-

User Story 3 – Receive Low Data Warning

User Story:

As a Vodafone customer, I want to receive notifications when my data is running low so that I can avoid unexpected charges or service interruptions.

Acceptance Criteria:

- * Given I have notifications enabled,
 - * When my remaining data falls below 20%,
 - * Then the app sends a push notification.
 - * The notification includes my remaining data balance.
 - * The notification contains a link to purchase additional data or upgrade my plan.
-

User Story 4 – Refresh Data Usage Information

User Story:

As a Vodafone customer, I want to refresh my data usage information so that I can view the most current usage details.

Acceptance Criteria:

- * Given I am viewing my data balance,
 - * When I pull down to refresh or select the refresh button,
 - * Then the app retrieves the latest usage information.
 - * A loading indicator is displayed while data is being retrieved.
 - * The updated balance is shown upon successful retrieval.
-

User Story 5 – View Historical Data Usage

User Story:

As a Vodafone customer, I want to view my past data usage history so that I can understand my usage trends over time.

Acceptance Criteria:

- * Given I am logged into the app,
- * When I select "Usage History",
- * Then I can view data usage for previous billing periods.
- * The app displays at least the last 6 months of usage history.
