Tennant Creek	Theft	17	0	0	17	2
Unknown	Sexual offences	1	0	0	1	1

Governance, security and distribution controls

Operational controls implemented for the Week 5 enterprise reporting exercise.

Control area	Implemented evidence	Validation result
Dynamic RLS	Regional Manager role filters Crime using the signed-in UPN and the RLS Territory Access mapping table.	Passed: Darwin test user returned 24,172 offences and one region.
Denied-by-default	A user without a mapping row receives no Crime rows.	Passed: unassigned test user returned blank totals.
Owner validation	S394861@students.cdu.edu.au is mapped to all eight reporting regions for controlled testing.	Passed: 84,862 offences across eight regions.
Workspace lifecycle	DEV -> TEST -> PROD gates cover data reconciliation, RLS, exports, sensitivity and approval.	Documented and ready for service deployment.
Pixel-perfect export	A4 landscape, fixed margins, repeating headers, numbered pages and print-safe colours.	Passed visual PDF inspection.
Distribution	Two monthly Power BI subscriptions deliver PDF and Excel copies from the live RLS report.	Passed: both self-subscriptions saved and test sends completed.

Release note

The Power BI semantic model and paginated report are published in My workspace. The final paginated report uses the native PBIDATASET SSO connection, inherits the Regional Manager role, and renders 2,339 offences for June 2026. Monthly PDF and Excel self-subscriptions are active and both test sends completed. Regional email bursting remains limited to controlled testing until real manager UPNs replace the example.com mapping rows.
